

NIKHIL SAI BOBBURI

Backend Software Engineer · Java · Spring Boot · C++

nikhilsai0330@gmail.com · +1 414-317-0485 · github.com/Nikhil-001 · Texas, USA · Open to relocation

SUMMARY

Backend Software Engineer with 4+ years of production engineering experience building high-concurrency server-side systems in C++ and Java. Designed and maintained deterministic state machines and rule engines for a live platform with 10,000+ concurrent users. Built and deployed a production-grade REST API using Spring Boot 3, JWT, Redis, PostgreSQL, and Docker — live with interactive Swagger UI. Strong foundation in distributed systems, stateless architecture, and backend performance. Open to relocation. Actively seeking backend, systems, or Java/Spring engineering roles.

TECHNICAL SKILLS

Languages:	Java, C++, Python, SQL, JavaScript
Frameworks:	Spring Boot 3, Spring Security, Spring Data JPA, REST API design, Microservices
Auth & Cache:	JWT, BCrypt, Redis (token blacklisting with TTL), stateless session design
Databases:	PostgreSQL, MySQL, MongoDB, H2
DevOps:	Docker, Docker Compose, Railway, AWS (EC2, S3, Lambda, API Gateway), Git, Maven, Linux
Testing:	JUnit 5, Mockito, regression testing, simulation test harnesses, bug triage

PROFESSIONAL EXPERIENCE

Software Developer Intern · Capgemini India

Oct 2021 – Jul 2022

- Built RESTful APIs with Spring Boot and implemented microservices architecture across two client-facing production projects
- Deployed to AWS using EC2, S3, Lambda, and API Gateway; integrated MuleSoft for API-led third-party connectivity
- Collaborated cross-functionally in Agile sprints and resolved backend integration issues in production environments

Volunteer Backend Engineer · Open-Source MMO Game Server (Remote)

Apr 2020 – Jul 2024

- Maintained C++ backend servers for a live multiplayer game with 10,000+ concurrent users across 4 years of continuous production ownership
- Designed rule-based state machines resolving 500+ ability/item/status interactions deterministically across multiple game generations
- Built Python NPC scripting systems, battle simulation test harnesses, and managed staged production deployments with rollback procedures

Operations Lead · Service Industry

Sep 2022 – Oct 2024

Sustained part-time employment to fund living expenses while completing a full-time M.S. in Computer Science — maintained performance under sustained academic and financial pressure.

PROJECTS

Task Manager REST API

Java 17 · Spring Boot 3 · JWT · Redis · PostgreSQL · Docker · Railway

- Built a stateless REST API with JWT authentication — register, login, and token-protected CRUD with per-user data ownership enforcement

- Implemented Redis token blacklisting for logout: tokens stored with TTL equal to remaining expiry, O(1) lookup on every incoming request
- Containerized with multi-stage Docker build (JDK build stage → JRE runtime), orchestrated via docker-compose, deployed live on Railway with PostgreSQL

Live demo: taskapi-production-3f0b.up.railway.app/swagger-ui.html · **GitHub:** github.com/Nikhil-001/taskapi

EDUCATION

M.S. Computer Science · University of Wisconsin-Milwaukee

Sep 2022 – Dec 2024

**B.Tech Computer Science · Institute of Aeronautical Engineering,
India**

Jul 2018 – May 2022

CERTIFICATIONS & TRAINING

- IT Support & Networking — Google (Coursera Certificate): 5-course program covering technical support, networking, OS administration, infrastructure, and cybersecurity fundamentals (May 2020 – Oct 2020)
